

## Problem Statement: Student Result Management System

### Scenario

A school wants to store and manage student marks.

```
student_marks = {  
  "Anuj": 85,  
  "Rahul": 72,  
  "Priya": 91,  
  "Neha": 68,  
  "Amit": 78  
}
```

The principal asks for the following information:

### Tasks

- Display the marks of **Priya**.
- Display the marks of **Amit**.
- Update Rahul's marks from 72 to 80.
- Check whether a student named **Rohan** exists.
- Display all student names.
- Display all marks.
- Find the highest scorer.
- Add a new student:  
    Rohan : 88
- Remove a student:  
    Neha
- Display all student records.
